Adaptive assessment meets authentic content

Now you can combine the precise assessment results of MAP Growth and the engaging, real-world content of Newsela.

Partnering to meet students where they are

Newsela is excited to partner with NWEA to help teachers meaningfully differentiate instruction and engage all learners at a time when widening learning gaps call for even more tailored ELA instruction. The MAP Growth assessment for reading gives

educators the data needed to understand what students are ready to learn. That same data is used to automatically set student reading levels on Newsela each time students take the MAP Growth assessment, so teachers don't need to spend precious time manually differentiating instruction.

The MAP Growth data integration is available to Newsela customers with a license to Newsela ELA, Newsela Social Studies, Newsela Science, or Newsela Essentials.

Using MAP Growth and Newsela together

When you use NWEA MAP Growth data and Newsela content solutions together, teachers can automatically meet students at their exact reading level with Newsela's authentic, differentiated content.

OPT IN

Newsela customers opt in by accepting the Data Sharing Agreement from the MAP Growth platform and sharing the needed rostering information with Newsela using OneRoster or Clever.

ASSESS STUDENTS

Assess your students with MAP Growth to get key literacy data. You will be notified when Newsela begins using this data to set reading levels.

DIFFERENTIATE INSTRUCTION

Students automatically see the Newsela content they love at the Lexile® measure that is closest to their precise reading level without exceeding it.

ASSESS AGAIN

Each time students take MAP Growth, their Newsela reading levels will be updated automatically, so instruction will continue to meet them where they are.
